

PUBLIC ELECTRIC VEHICLE CHARGING STATIONS IN SAN CLEMENTE

Need a charge for your electric vehicle? There are public charging stations available throughout town on various charging networks including Tesla, EVGO, ChargePoint and others. The City of San Clemente offers 4 charging ports via the ChargePoint network at San Clemente City Hall (see more info below). You can find other publicly available charging stations via these websites:

- www.plugshare.com
- www.openchargemap.org

San Clemente City Hall Electric Vehicle Charging Station 910 Calle Negocio, San Clemente, CA 92673

The San Clemente City Hall electric vehicle charging station is located in the City Hall parking lot to the right of the City Hall building entrance. The charging station consists of two DC Fast Charge stations and one Level 2 station with two ports, for a total of four electric vehicle charging spaces (see photo below). These are available 24 hours per day, 7 days per week to anyone with a ChargePoint account.

Electric vehicle drivers can take advantage of the new charging stations by using the ChargePoint app (available in the Apple App Store and Google Play Store) or by creating an account at www.chargepoint.com. Users will be charged a nominal fee of 20 cents per kilowatt hour while charging to cover the City's costs. To encourage moving vehicles once charging is completed, there is also a \$5 per hour parking charge, which will begin after one hour in the DC Fast Charge spaces and after three hours in the Level 2 spaces. Note that charging rates are subject to change, please check the ChargePoint app for the latest information.

The new charging stations were primarily funded by California Energy Commission rebates and Mobile Source Pollution Reduction grant funds. Using similar grant funds, the City also recently purchased two Chevrolet Bolt all-electric vehicles for the City fleet, which will be charged with these new electric vehicle charging stations at City Hall.
