FOR IMMEDIATE RELEASE

City Announces Public Meetings on the *Nature Based Coastal Resiliency Project*

February 6, 2023... San Clemente, California.... The City is preparing a *Nature Based Coastal Resiliency Project Feasibility Study* that identifies critical beach erosion hot spots and solutions to address short-term and long-term coastal erosion. The first public outreach meeting will be held at 6:00 pm on Tuesday, February 14, 2023 by the City's Beaches, Parks and Recreation Commission at the San Clemente City Council Chambers. The purpose of the City's *Nature Based Coastal Resiliency Project Feasibility Study* is to identify feasible solutions to promote long-term resiliency of the City's beaches by retaining sand and reducing sand loss. The goal of the Study is to identify pilot projects for implementation and public input is essential to this Study. Residents and other interested parties are encouraged to attend to provide input on preferred coastal resiliency solutions. The *Nature Based Coastal Resiliency Project Feasibility Study* implements key recommendations in the *Coastal Resiliency Plan (2021)* and *Sea Level Rise Vulnerability Assessment (2019)*. More information is available at [Local Coastal Program | City of San Clemente, CA \(san-clemente.org\)](https://www.san-clemente.org/LocalCoastalProgram) Please join the mailing list to stay informed on Study progress and to receive future notices of upcoming meetings and availability of public documents. Please sign up for future emails at: LCP@San-Clemente.org
