### FOR IMMEDIATE RELEASE

#### City Announces Availability of a Report on Critical Erosion Hot Spots

June 30, 2023... San Clemente, California.... The City is preparing a *Nature Based Resiliency Project Feasibility Study* that identifies erosion hot spots and solutions to address short-term and long-term coastal erosion in the City. As part of this effort, a “*Critical Erosion Hot Spots*” Report has been published which identifies which beaches in the greater San Clemente region are experiencing the worst erosion and which beaches appear to be somewhat more stable. The preliminary findings in this report will be used by the City to develop coastal resiliency solutions aimed at reducing erosion, stabilizing and widening the beaches in the City using nature-based or “green” solutions as a first priority. The report is available at the following link [Local Coastal Program | City of San Clemente, CA \(san-clemente.org\)](https://www.san-clemente.org/local-coastal-program).

Ultimately, the key goal of the City’s *Nature Based Project Resiliency Study* is to identify pilot projects for implementation in the City. Public input is an essential part of this Study and residents and other stakeholders are encouraged to provide input on preferred shoreline solutions. Please join the mailing list to stay informed on the progress of this Study and to receive future notices of upcoming meetings and notices of availability of public documents. Please send an email to: [LCP@San-Clemente.org](mailto:LCP@San-Clemente.org)
