FOR IMMEDIATE RELEASE

San Clemente Shoreline Sand Replenishment Project Update

May 2, 2024... San Clemente, California... The San Clemente Shoreline Sand Replenishment Project is back underway! More than 20,000 cubic yards of sand have been placed so far south of the San Clemente Pier!

During the current phase of the project, sand placement will occur seven days a week through the end of May. At the current pace, approximately half of the total sand quantity in this placement cycle will be delivered this spring, with the project resuming in the fall of 2024 to place the remaining quantity of sand. A combined total of 251,000 cubic yards of sand is scheduled to be placed between Linda Lane and T-Street beaches.

More information is available at www.san-clemente.org/beachsand. The City appreciates the continued support, cooperation and patience of the community while we replenish our beaches!
